

Epoxy Floor Cleaning Instructions

Cleaning your epoxy floor on a regular basis is very important. The longer you wait to clean, the harder it may be to remove all the spots.

Recommended cleaning procedures:

- 1) Back out your cars and remove any objects that are on your floor.
- 2) Use a leaf blower to blow out your garage floor.
- 3) Use an industrial mop and mop your floor
- 4) Let floor air dry

***Never use anything abrasive to clean your floor because that can scratch the surface.**
